- Caltra Invests in a New means of Packaging -

in the form of Polyethylene (Plastic) Bags

Caltra has taken into use a new production line, with the ability to package our products in new Polyethylene (plastic) bags, providing better resistance to various conditions such as moisture and aging.

The new line can package any powdery product in bags between 10 and 30 kilograms, conform the clients' wishes, with a maximum capacity of 250 bags an hour. These bags, when properly sealed, guarantee a long shelf life and consistent quality and performance.

Polyethylene packaging allows for outdoor storage, professional prints, and is easily disposed of.

Caltra is able to package under private label and adjust her blends to meet customers' specific requirements.
