### **CALTRA fully automated packing line**

CALTRA has taken in use their second blending and packing line – fully automated and computer controlled.

Increased demand for sales of specialties packed in small bags of 25 kg / 55,12 lbs. lead to a fully automated filling and palletizing line. We use plastic foil to assure stable pallets leading to safe transport and handling in the warehouse – well protected from humidity.

Standard we use EURO-pallets but to service export-markets different size pallets can be ordered. We are flexible in the number of bags per pallet or the weight per bags.
