CALTRA introduces new calcium aluminate cement developed for the use in SLU

CALIGHT 40 is a melted alumina cement guarantees a high early strength cement in compliance with the EN 14647.

It is grinded to a higher surface area to facilitate the use in SLU (self levelling underlayment). This stable binder can be integrated in the most difficult binder matrixes to ensure rapid set, high early strength and rapid drying.

We offer the possibility to introduce hemi-hydrate or anhydrite.
