

- Caltra Introduces her New Palletizer -

Caltra replaces her original means of palletizing with a new intelligent palletizing robot capable of palletizing up to 800 bags an hour.

This newest investment allows for greatly increased productivity.

Flexibility in the amount of bags per pallet and the pattern in which they are stacked is also much improved. Caltra has increased her ability therefore, to meet clients' wishes and needs.

The palletizing robot adjusts its own speed, places both the pallet and a top sheet if necessary / requested and places the bags themselves of course, all using the same robotic arm.

The new palletizer works in unison with both production lines, palletizing both the paper valve bags and the polyethylene bags, simultaneously if necessary.
